

METERWISE

Utility Recovery Intelligence for Multi-Tenant Property Portfolios

Every kWh and kL accounted for — billed, recovered, and proven.

PREPARED FOR

[Client / Portfolio Name]

September 2026

Prepared by Marnus Steyn, Founder

THE 30-SECOND PITCH

Every month, commercial and industrial property owners lose thousands of Rand to utility under-recovery — municipal tariff errors, drifting meters, and billing models that don't match the account. Meterwise reconciles every municipal statement against every tenant bill, flags the errors automatically, and shows you exactly what's being left on the table — before it compounds.

1 The Problem

Multi-tenant sites run on manual spreadsheets and PDF statements. Tariff changes go unnoticed, meters drift out of calibration, and recoveries fall behind consumption — often for months before anyone catches it.

Typical cost: 3–12% of billable utility revenue, unrecovered.

2 The Solution

A recovery-intelligence platform that ingests every municipal statement and tenant bill, reconciles them automatically, and flags mismatches by exception — tariff shape, meter accuracy, billing-period drift — with audit-ready reporting for owners, managers and tenants.

3 How It Works

01 Ingest

Municipal statements and tenant meter readings, imported monthly.

02 Reconcile

Every tenant charge checked against the correct tariff and municipal account.

03 Flag

Exceptions surfaced automatically — tariff errors, meter drift, missed months.

04 Report

Recovery %, consumption trends and audit-ready statements, per site.

4 What You Get

- **Recovered revenue**
Under-recovery caught and billed back, not written off.
- **Early-warning flags**
Tariff and meter errors caught within one billing cycle, not one year.
- **Audit-ready proof**
Every Rand and every kWh traceable to source, for tenants and auditors alike.

5 Who It's For

Property managers and owners running multi-tenant commercial or industrial portfolios — shopping centres, business parks, and industrial estates — where utilities are recovered from tenants and municipal billing errors are easy to miss at scale.

Proof of concept:

Built and running across a live portfolio of 12+ commercial and industrial sites in Gauteng — reconciling municipal accounts against tenant billing, every month, at scale.

Let's find out what your portfolio is leaving on the table.

30-minute walkthrough, using one of your own municipal statements — no commitment.
